Abstract

Economic is a science that teaches us how to meet endless needs with scarce resources. This branch of science not only helps us understand the course of daily life, but also helps us make the right financial decisions and look at our world from a different perspective. While the rate of placement in a 4-year faculty in higher education in 2021 in Turkey is 79%, only 1% of the settlers choose the department of economics. In this study, based on a literature review, aims to find out how getting an economics education during high school education will affect people's future education life and financial behaviors. In the study carried out for this purpose, it is concluded that the tendency towards economics education in the university will increase and the rate of passing the economics courses at the university will increase as well. In addition to this, the financial behaviors of people change in the short term, they are more realistic in their savings and expenditures and they look after the interests of the country. And also, it can be concluded that economics education can have a positive effect on the country's economic development in the long run and increase awareness in the economy.
